FOR IMMEDIATE RELEASE

ARC sponsors access to curated RAC Standards to technicians and businesses

The Australian Refrigeration Council (ARC) is pleased to announce a new initiative designed to support RAC technicians and businesses, including Refrigerant Handling Licence (RHL) and Refrigerant Trading Authorisation (RTA) holders by providing easy access to essential industry standards.

Funded by ARC's corporate efforts, this initiative will allow permit holders to view the curated set of Refrigeration and Air Conditioning (RAC) Standards on the Standards Australia mobile app, using a sponsored voucher code that can be obtained via the [ARC](#) website. These standards offer comprehensive guidance across the full lifecycle of RAC systems, covering specification, design, installation, servicing, and end-of-life decommissioning.

Referenced in Section 135 of the *Ozone Protection and Synthetic Greenhouse Gas Management Regulations 1995 (Cth)*, these standards form part of the compliance framework for licensed technicians under the terms of their licence.

ARC CEO Glenn Evans said, "This initiative is about equipping the industry with the tools they need to uphold safety, environmental responsibility, and regulatory compliance. Making these Standards easily accessible is a step forward in strengthening industry capability and professionalism."

Permit holders can obtain a free voucher code via the ARC website at www.arcltd.org.au/standards. This code can then be redeemed through the Standards Australia Store for mobile-only access via the Standards Australia online store. Please note that voucher codes are limited each month and are available on a first-come, first-served basis.

By facilitating access to these standards, ARC is helping to elevate industry standards, empower technicians, and promote best practice across the climate control sector.
